Subject: RE: FRD905?

Thank you Lam.

I appreciate your clarification of this issue.

Andy

Subject: RE: FRD905?

Hi Andy,

Thanks for your question. FRD905 is a mixture of substances. The composition of the substances in the mixture are considered to be confidential business information ("CBI"); however, I understand we have provided information on its composition and use in confidential submissions provided in response to questions which followed-up on plant visits made last year by EPA Region 4 personnel. We've also provided the information to Headquarters personnel too I am told.

If you have been given access to the information we have provided to the regional office and EPA Headquarters in that context, you can learn more about the mixture. You would need to have been "cleared" for access to TSCA CBI from what I understand.

Best Regards,

Lam

Hi Andy,

Thank you for the message and I apologize for the late response as I was at ACS in NOLA all week last week. I'll have to look through our internal documentation about your inquiry and will get back to you the next few days.

Hi Mark,

We are still working on getting all the proper SDS for the different standards and has taken us much longer than anticipated and we are hoping that we'll have them shipped out to you next week.

Best Regards,

Lam

Subject: FRD905?

Lam,

Have you ever heard of FRD905?

From what I've read FRD902 is the GenX ammonium salt and FRD903 is the free acid.

Please check out the attached document from the WV DEP where DuPont refers to FRD905 (marked in yellow in two places) as being equivalent to FRD902 and FRD903.

I'm wondering if it may just be another salt such as potassium or sodium.

If you have any knowledge on this I'd be grateful if you would please let me know.

Thank you very much,

Andy
